PODAR INTERNATIONAL SCHOOL

PERIODIC TEST 1 (2024-25)

Std.: VII **Sub.: Science**

Time Allowed: 1 hour **Maximum Marks: 20**

General Instructions:

Read the following instructions very carefully and strictly follow them:

*(i) This question paper comprises **9** questions. **All** questions are compulsory.*

*(ii) This question paper is divided into **five** sections – **A**, **B**, **C**, **D** and **E**.*

*(iii) **Section A** – Questions No. **1** to **4** are Multiple Choice Questions. Each question carries **1** mark.*

*(iv) **Section B** – Questions No. **5** to **6** are Very Short Answer type questions. Each question carries **2** marks. Answers to these questions should be in the range of 30 to 50 words.*

*(v) **Section C** – Question No. **7** is a Short Answer type question carrying **3** marks. Answer to this question should be in the range of 50 to 80 words.*

*(vi) **Section D** – Question No. **8** is a Long Answer type question carrying **5** marks. Answer to this question should be in the range of 80 to 120 words.*

*(vii) **Section E** – Question No. **9** is a source-based/case-based units of assessment carrying **4** marks each with sub-parts.*

(viii) There is no overall choice.

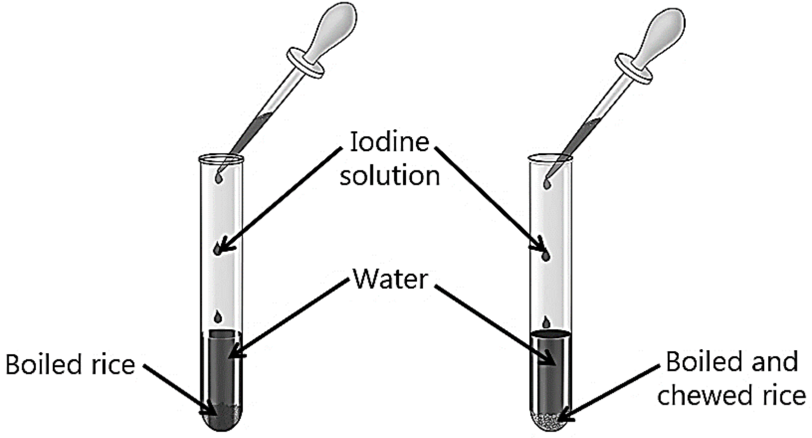
SECTION – A

*Select and write the most appropriate option out of the four options given for each of the questions no. **1** to **4**.*

1. Which of the following plants have numerous tentacles with drops of sticky substance at their ends? 1
   - (a) Pitcher plant
   - (b) Cuscuta
   - (c) Venus flytrap
   - (d) Sundew plant

2. Which of these following statement/s is/are true about lichens? 1
   - I. They are formed by a symbiotic relationship between certain plants and fungi.
   - II. They are formed by a symbiotic relationship between algae and fungi.
   - III. They are found in places with lots of decaying organic matter, such as tropical forests.
   - IV. They are found in places like the Arctic Tundra, hot deserts, rainforests and rocky coasts.
   - (a) I and III
   - (b) I and IV
   - (c) II and III
   - (d) II and IV

3. Garima wanted to study the effect of saliva on food. She arranged the given setup for her experimental study. 1



Test tube A **Test tube B**

Which of the given options shows the correct observation and conclusion for this experimental study?

	OBSERVATION	**CONCLUSION**
(a)	Colour changes to blue-black in test tube A	Saliva breaks down the fats present in food into fatty acids
(b)	No colour change is observed in test tube B	Saliva breaks down the starch present in food into simple sugars
(c)	No colour change is observed in test tube A	Saliva breaks down the starch present in food into simple sugars
(d)	Colour changes to blue-black in test tube B	Saliva breaks down the fats present in food into fatty acids

Question No. 4 consists of two statements – Assertion (A) and Reason (R).
Answer this question selecting the appropriate option given below:
(a) Both A and R are true, and R is the correct explanation of A.
(b) Both A and R are true, and R is not the correct explanation of A.
(c) A is true but R is false.
(d) A is false but R is true.

4. Assertion: Earthworms are detritivores. 1
Reason: Earthworms ingest the dead organic matter, digest and break it down internally into simple nutrients.

SECTION – B

*Questions no. **5** and **6** are very short answer type questions.*

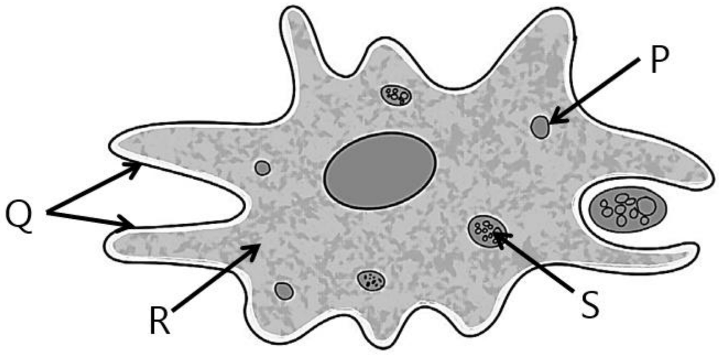
5. The mucous lining of the small intestine has millions of finger-like projections. 2
(a) What are these finger-like projections called?
(b) Mention its main function.

6. Haustoria are also called sucking roots. Justify this statement. 2

SECTION – C

Question no. ***7*** *is a short answer type question.*

7. The given picture is of an amoeba. 3



(a) Which labelled part helps in the excretion of undigested food?
(b) Identify the labelled part that contains hydrolytic enzymes.
(c) Which labelled part changes its shape to form finger-like projections?

SECTION – D

Question no. ***8*** *is a long answer type question.*

8. Green plants make their food from carbon dioxide and water in the presence of chlorophyll by using light energy from the Sun. 5

(a) What is this process called? Write the end products of this process.
(b) How is carbon dioxide taken up by plants from the atmosphere for this process?
(c) Name the mode of nutrition in green plants.

SECTION – E

The following question is a source-based/case-based question. Read the case carefully and answer the questions that follow.

9. The table given below shows the hints given by the quiz master in a quiz. 4

S.NO.	HINT
(i)	A human tooth is made up of a bone-like hard structure called 'X'.
(ii)	Structure 'X' is covered with a hard, shiny covering known as the 'Y', which is the hardest substance in our body.
(iii)	A sticky yellowish layer of 'Z' forms on our teeth due to poor oral hygiene and produce acids.
(iv)	These acids corrode structure 'Y' and may cause tooth decay and cavities.

Based on the above hints, answer the following questions.

(a) Name structures 'X' and 'Y'.
(b) Identify 'Z'. How does it form on our teeth?
